1. Introduction

The object of this paper is to establish an general Eulerian integral involving the product of two multivariable A-functions defined by Gautam et [1] a expansion of multivariable I-function defined by Nambisan et al [2] and a class of multivariable polynomial defined by Srivastava et al [4].

First time, we define the multivariable $\bar{I}$-function by :

$$I(z_1,\cdots,z_r) = \bar{I}^{0,n:m_1,n_1;\cdots;m_r,n_r}_{p,q:p_1,q_1;\cdots;p_r,q_r}\left(\begin{array}{c|c} \mathrm{z}_1 & (\mathrm{a}_j;\alpha_j^{(1)},\cdots,\alpha_j^{(r)};A_j)_{n+1,p} : \\ \cdot & \\ \cdot & \\ \cdot & \\ \mathrm{z}_r & (\mathrm{b}_j;\beta_j^{(1)},\cdots,\beta_j^{(r)};B_j)_{m+1,q} : \end{array}\right.$$

$$\left.\begin{array}{c} (\mathrm{c}_j^{(1)},\gamma_j^{(1)};1)_{1,n_1},(c_j^{(1)},\gamma_j^{(1)};C_j^{(1)})_{n_1+1,p_1};\cdots;(c_j^{(r)},\gamma_j^{(r)};1)_{1,n_r},(c_j^{(r)},\gamma_j^{(r)};C_j^{(r)})_{n_r+1,p_r} \\ (\mathrm{d}_j^{(1)},\delta_j^{(1)};1)_{1,m_1},(d_j^{(1)},\delta_j^{(1)};D_j^{(1)})_{m_1+1,q_1};\cdots;(d_j^{(r)},\delta_j^{(r)};1)_{1,m_r},(d_j^{(r)},\delta_j^{(r)};D_j^{(r)})_{m_r+1,q_r} \end{array}\right) \quad (1.1)$$

$$= \frac{1}{(2\pi\omega)^r}\int_{L_1}\cdots\int_{L_r}\phi_1(s_1,\cdots,s_r)\prod_{i=1}^{r}\theta_i(s_i)z_i^{s_i}\mathrm{d}s_1\cdots\mathrm{d}s_r \quad (1.2)$$

where $\phi_1(s_1,\cdots,s_r),\theta_i(s_i), i=1,\cdots,r$ are given by :

$$\phi_1(s_1,\cdots,s_r) = \frac{1}{\prod_{j=n+1}^{p}\Gamma^{A_j}\left(a_j-\sum_{i=1}^{r}\alpha_j^{(i)}s_j\right)\prod_{j=m+1}^{q}\Gamma^{B_j}\left(1-b_j+\sum_{i=1}^{r}\beta_j^{(i)}s_j\right)} \quad (1.3)$$

$$\theta_i(s_i) = \frac{\prod_{j=1}^{n_i}\Gamma\left(1-c_j^{(i)}+\gamma_j^{(i)}s_i\right)\prod_{j=1}^{m_i}\Gamma\left(d_j^{(i)}-\delta_j^{(i)}s_i\right)}{\prod_{j=n_i+1}^{p_i}\Gamma^{C_j^{(i)}}\left(c_j^{(i)}-\gamma_j^{(i)}s_i\right)\prod_{j=m_i+1}^{q_i}\Gamma^{D_j^{(i)}}\left(1-d_j^{(i)}-\delta_j^{(i)}s_i\right)} \tag{1.4}$$

$i=1,\cdots,r$

Serie representation

If $z_i \neq 0; i=1,\cdots,r$

$\delta_{h_i}^{(i)}(d_j^{(i)}+k_i) \neq \delta_j^{(i)}(\delta_{h_i}^{(i)}+\eta_i) for j \neq h_i, j, h_i = 1,\cdots,m_i (i=1,\cdots,r), k_i, \eta_i = 0,1,2,\cdots (i=1,\cdots,r)$, then

$$\bar{I}(z_1,\cdots,z_r) = \sum_{h_1=1}^{m_1}\cdots\sum_{h_r=1}^{m_r}\sum_{k_1=0}^{\infty}\cdots\sum_{k_r=0}^{\infty}\left[\phi_1\left(\frac{dh_1^{(1)}+k_1}{\delta h_1^{(1)}},\cdots,\frac{dh_r^{(r)}+k_r}{\delta h_r^{(r)}}\right)\right]_{j\neq h_i}\prod_{i=1}^{r}\frac{(-)^{k_i}}{\delta h_i^{(i)}k_i!}z_i^{\frac{dh_i+k_i}{\delta h_i}} \tag{1.5}$$

This result can be proved on computing the residues at the poles :

$$s_i = \frac{dh_i^{(i)}+k_i}{\delta h_i^{(i)}}, (h_i=1,\cdots,m_i, k_i=0,1,2,\cdots) for i=1,\cdots,r \tag{1.6}$$

We may establish the the asymptotic expansion in the following convenient form :

$$\bar{I}(z_1,\cdots,z_r) = 0(\,|z_1|^{\alpha_1},\cdots,|z_r|^{\alpha_r}\,), max(\,|z_1|,\cdots,|z_r|\,)\rightarrow 0$$

$$\bar{I}(z_1,\cdots,z_r) = 0(\,|z_1|^{\beta_1},\cdots,|z_r|^{\beta_r}\,), min(\,|z_1|,\cdots,|z_r|\,)\rightarrow \infty$$

where $k=1,\cdots,r : \alpha_k = min[Re(d_j^{(k)}/\delta_j^{(k)})], j=1,\cdots,m_k$ and

$$\beta_k = max[Re((c_j^{(k)}-1)/\gamma_j^{(k)})], j=1,\cdots,n_k$$

We will note $\eta_{h_i,k_i} = \frac{dh_i^{(i)}+k_i}{\delta h_i}$ $, (h_i=1,\cdots,m_i, k_i=0,1,2,\cdots) for i=1,\cdots,r$ (1.7)

The A-function is defined and represented in the following manner.

$$A(z'_1,\cdots,z'_s) = A_{p',q':p'_1,q'_1;\cdots;p'_s,q'_s}^{m',n':m'_1,n'_1;\cdots;m'_s,n'_s}\left(\begin{array}{c|c} z'_1 & (a'_j;A'^{(1)}_j,\cdots,A'^{(s)}_j)_{1,p'} : \\ \cdot & \\ \cdot & \\ \cdot & \\ z'_s & (b'_j;B'^{(1)}_j,\cdots,B'^{(s)}_j)_{1,q'} : \end{array}\right.$$

$$\left.\begin{array}{l} (c'^{(1)}_j,C'^{(1)}_j)_{1,p'_1};\cdots;(c'^{(s)}_j,C'^{(s)}_j)_{1,p'_s} \\ \\ (d'^{(1)}_j,D'^{(1)}_j)_{1,q'_1};\cdots;(d'^{(s)}_j,D'^{(s)}_j)_{1,q'_s} \end{array}\right) \tag{1.8}$$

$$= \frac{1}{(2\pi\omega)^s} \int_{L'_1} \cdots \int_{L'_s} \phi(t_1, \cdots, t_s) \prod_{i=1}^{s} \zeta_i(t_i) z_i'^{t_i} \mathrm{d}t_1 \cdots \mathrm{d}t_s \tag{1.9}$$

where $\phi(t_1, \cdots, t_s), \zeta_i(t_i), i = 1, \cdots, s$ are given by :

$$\phi(t_1, \cdots, t_s) = \frac{\prod_{j=1}^{m'} \Gamma(b'_j - \sum_{i=1}^{s} B_j'^{(i)} t_i) \prod_{j=1}^{n'} \Gamma(1 - a'_j + \sum_{i=1}^{s} A_j'^{(i)} t_j)}{\prod_{j=n'+1}^{p'} \Gamma(a'_j - \sum_{i=1}^{s} A_j'^{(i)} t_j) \prod_{j=m'+1}^{q'} \Gamma(1 - b'_j + \sum_{i=1}^{s} B_j'^{(i)} t_j)} \tag{1.10}$$

and

$$\zeta_i(t_i) = \frac{\prod_{j=1}^{n'_i} \Gamma(1 - c_j'^{(i)} + C_j'^{(i)} t_i) \prod_{j=1}^{m'_i} \Gamma(d_j'^{(i)} - D_j'^{(i)} t_i)}{\prod_{j=n'_i+1}^{p'_i} \Gamma(c_j'^{(i)} - C_j'^{(i)} t_i) \prod_{j=m'_i+1}^{q'_i} \Gamma(1 - d_j'^{(i)} - D_j'^{(i)} t_i)} \tag{1.11}$$

$$\xi_i^* = Im\left(\sum_{j=1}^{p'} A_j'^{(i)} - \sum_{j=1}^{q'} B_j'^{(i)} + \sum_{j=1}^{q'_i} D_j'^{(i)} - \sum_{j=1}^{p'_i} C_j'^{(i)}\right); i = 1, \cdots, s \tag{1.14}$$

$$\eta_i = Re\left(\sum_{j=1}^{n'} A_j'^{(i)} - \sum_{j=n'+1}^{p'} A_j'^{(i)} + \sum_{j=1}^{m'} B_j'^{(i)} - \sum_{j=m'+1}^{q'} B_j'^{(i)} + \sum_{j=1}^{m'_i} D_j'^{(i)} - \sum_{j=m'_i+1}^{q'_i} D_j'^{(i)} + \sum_{j=1}^{n'_i} C_j'^{(i)} - \sum_{j=n'_i+1}^{p_i} C_j'^{(i)}\right)$$

2. Integral representation of Lauricella function of several variables

The Lauricella function $F_D^{(k)}$ is defined as

$$F_D^{(k)}[a,b_1,\cdots,b_k;c;x_1,\cdots,x_k]=\frac{\Gamma(c)}{\Gamma(a)\prod_{j=1}^{k}\Gamma(b_j)}\frac{1}{(2\pi\omega)^k}\int_{L_1}\cdots\int_{L_k}\frac{\Gamma\left(a+\sum_{j=1}^{k}\zeta_j\right)\Gamma(b_1+\zeta_1),\cdots,\Gamma(b_k+\zeta_k)}{\Gamma\left(c+\sum_{j=1}^{k}\zeta_j\right)}$$

$$\prod_{j=1}^{k}\Gamma(-\zeta_j)(-x_j)^{\zeta_i}\,\mathrm{d}\zeta_1\cdots\mathrm{d}\zeta_k \tag{2.1}$$

where $max\,[|arg(-x_1)|,\cdots,|arg(-x_k)|]<\pi, c\neq 0,-1,-2,\cdots$.

In order to evaluate a number of integrals of multivariable A-functions, we first establish the formula

$$\int_a^b (t-a)^{\alpha-1}(b-t)^{\beta-1}\prod_{j=1}^{k}(f_jt+g_j)^{\sigma_j}\mathrm{d}t=(b-a)^{\alpha+\beta-1}B(\alpha,\beta)\prod_{j=1}^{k}(af_j+g_j)^{\sigma_j}$$

$$\times F_D^{(k)}\left[\alpha,-\sigma_1,\cdots,-\sigma_k;\alpha+\beta;-\frac{(b-a)f_1}{af_1+g_1},\cdots,-\frac{(b-a)f_k}{af_k+g_k}\right] \tag{2.2}$$

where $a,b\in\mathbb{R}(a<b),\alpha,\beta,f_i,g_i,\sigma_i\in\mathbb{C},(i=1,\cdots,k)$; $min(Re(\alpha),Re(\beta))>0$ and

$$\max_{1\leqslant j\leqslant k}\left\{\left|\frac{(b-a)f_i}{af_i+g_i}\right|\right\}<1$$

$F_D^{(k)}$ is a Lauricella's function of k-variables, see Srivastava et al ([5], page60)

The formula (2.2) can be establish by expanding $\prod_{j=1}^{k}(f_jt+g_j)^{\sigma_j}$ by means of the formula :

$$(1-z)^{-\alpha}=\sum_{r=0}^{\infty}\frac{(\alpha)_r}{r!}z^r(|z|<1) \tag{2.3}$$

integrating term by term with the help of the integral given by Saigo and Saxena [3, page 93, eq.(3.2)] and applying the definition of the Lauricella function $F_D^{(k)}$ [5, page 60].

Proof

To prove (3.17), first, we express in serie the multivariable I-function defined by Nambisan et al [2] with the help of (1.5), a class of multivariable polynomials defined by Srivastava $S_{N_1,\cdots,N_v}^{M_1,\cdots,M_v}[.]$ in serie with the help of (1.20), the A-functions of s-variables and u-variables defined by Gautam et al [1] in terms of Mellin-Barnes type contour integral with the help of (1.2) and (1.9) respectively. Now interchange the order of summations and integrations (which is easily seen to be justified due to the absolute convergence of the integral and the summations involved in the process). We collect the power of (p_jt+q_j) with $j=1,\cdots,h$ and use the equations (2.1) and (2.2) and we obtain h-Mellin-Barnes contour integral and interpreting $(s+u+h)-$Mellin-barnes contour integral in multivariable A-function, we obtain the desired result.

Remark :

If a) $\gamma_1=\cdots=\gamma_s=\gamma'_1=\cdots,\gamma'_u=0$ and $\lambda_1=\cdots=\lambda_r=\lambda'_1=\cdots=\lambda'_v=0$

b) $\tau_1=\cdots=\tau_s=\tau'_1=\cdots=\tau'_u=0$ and $\mu_1=\cdots=\mu_r=\mu'_1=\cdots=\mu'_v=0$

we obtain the similar formulas that (3.17) with the corresponding simplifications.

4.Particular case

1)If ${A'_j}^{(i)},{B'_j}^{(i)},{C'_j}^{(i)},{D'_j}^{(i)}\in\mathbb{R}$,$m'=0$ and ${A''_j}^{(i)},{B''_j}^{(i)},{C''_j}^{(i)},{D''_j}^{(i)}\in\mathbb{R}$ and $m''=0$, the multivariable A-functions reduces to multivariable H-functions defined by Srivastava et al [6]. We obtain the following formula.

$$\int_m^n (t-m)^{a-1}(n-t)^{b-1}\prod_{j=1}^h (p_jt+q_j)^{\rho_j} S_{N_1,\cdots,N_v}^{M_1,\cdots,M_v}\begin{pmatrix} \mathrm{Z}_1(t-m)^{\lambda'_1}(n-t)^{\mu'_1}\prod_{j=1}^h(p_jt+q_j)^{b'_j} \\ . \\ . \\ . \\ \mathrm{Z}_v(t-m)^{\lambda'_v}(n-t)^{\mu'_v}\prod_{j=1}^h(p_jt+q_j)^{b_j^{(r)}} \end{pmatrix}$$

$$\bar{I}\begin{pmatrix} \mathrm{z}_1(t-m)^{\lambda_1}(n-t)^{\mu_1}\prod_{j=1}^h(p_jt+q_j)^{a'_j} \\ . \\ . \\ . \\ \mathrm{z}_r(t-m)^{\lambda_r}(n-t)^{\mu_r}\prod_{j=1}^h(p_jt+q_j)^{a_j^{(r)}} \end{pmatrix} H\begin{pmatrix} \mathrm{z'}_1(t-m)^{\gamma_1}(n-t)^{\tau_1}\prod_{j=1}^h(p_jt+q_j)^{-c_j^{(1)}} \\ . \\ . \\ . \\ \mathrm{z'}_s(t-m)^{\gamma_s}(n-t)^{\tau_s}\prod_{j=1}^h(p_jt+q_j)^{-c_j^{(s)}} \end{pmatrix}$$

$$H\begin{pmatrix} \mathrm{z''}_1(t-m)^{\gamma'_1}(n-t)^{\tau'_1}\prod_{j=1}^h(p_jt+q_j)^{-c'^{(1)}_j} \\ . \\ . \\ . \\ \mathrm{z''}_u(t-m)^{\gamma'_u}(n-t)^{\tau'_u}\prod_{j=1}^h(p_jt+q_j)^{-c'^{(u)}_j} \end{pmatrix}\mathrm{d}t$$

under the same conditions and notations that (3.17) with $A'^{(i)}_j, B'^{(i)}_j, C'^{(i)}_j, D'^{(i)}_j \in \mathbb{R}$,$m' = 0$ and $A''^{(i)}_j, B''^{(i)}_j, C''^{(i)}_j, D''^{(i)}_j \in \mathbb{R}$ and $m'' = 0$

Remark:

By the following similar procedure, the results of this document can be extented to product of any finite number of multivariable A-functions defined by Gautam et al [1] and a class of multivariable polynomials defined by Srivastava et al [4].

5. Conclusion

In this paper we have evaluated a generalized Eulerian integral involving the product of three multivariable A-functions defined by Gautam et al [1] with general arguments. The formulae established in this paper is very general nature. Thus, the results established in this research work would serve as a key formula from which, upon specializing the parameters, as many as desired results involving the special functions of one and several variables can be obtained.
